Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   417
                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents a DNA sequence encoding the heavy chain variable region of primate monoclonal antibody anti-buman CD23 dGS. The invention provides primate monoclonal antibodies which specifically bind human CD23, the low affinity receptor for 1gE (FceRii/CD23), and comprise either of a human gamma-1 or human gamma-3 constant region that binds to human FC gamma receptors and inhibits 1gE expression. The monoclonal antibodies of the invention are claimed to be useful for inhibiting induced 1gE production for treating or preventing conjunctivitis, autoimmune hasmolytic anaemia, etc. (Updated on 25-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 177
